

AP Calculus AB

Congratulations on your decision to take AP Calculus AB! All the hard work you have put into your mathematics learning over the past several years has finally culminated into this particular course.

The first few pages of this packet will serve as a quick overview of the year ahead including information about the TI-84 graphing calculator. Like a few other AP classes, there is a fair amount of summer work I'd like you complete. Overall, you should not need to invest much more than 10-12 hours in total. I would suggest also that you spread the work of the packet out over the course of the summer. You can still enjoy your summer. After all, you've earned it!
