## Logging Into Global Protect

The Global Protect client functions as an internet connection back into our network for users at home while also serving as a web filter.

If you are having issues with some things being blocked, it is a good idea to check the status of Global Protect on your computer.

1. Click the tray near the clock in the bottom right corner of your screen.

2. Find the globe and shield and click on it.

3. You need the screen that pops up to say you are connected to Global Protect.

4. To connect to Global Protect, login with frist.last name and your email password.

If you enter your username **do not add @ucps.k12.nc.us**, just use first.last.

If you experience any difficulties please submit a Help Desk ticket or contact your local desktop support engineer.
